Activity-5

Presentation and submission MVP-3

Tejal Patel,

Student ID- 200460103

Project Commercial

- https://youtu.be/Wb9cWx8tOSM

Reflection

➢ How you felt about this project (likes/dislikes):

- I feel great by developing this project.

- requirement gathering from activity-1.

- certain features I like most: Search, Authentication and Add a listing

- Got familiar with new technology Django framework.

Reflection

➢ What went well during the project

  - Designing the templates

  - Search function.

  - Database connectivity

➢ What not went well during the project

  - Add a listing function. When I was implementing the code, I got lots of errors and to solve all of that, it took 5-7 days to work properly.

Reflection

➢ Software design activities and findings.

- For the design of this project, Incremental model is used.

- Throughout this project, Kanban board is well maintained.

- I have gained lot of information about design activities such as identities, participation, reification, content and people component from the "Making sense of the technology landscape" lecture.

Reflection

➢ What would you do the same on future projects?

   - In future projects, I would like to use the technology framework as it is one of the easiest framework to develop the web applications within the limited time periods.

   - I will take reference of the project features, design methods and documentation of it.

• Future scope in this project:

   - linking location with the google map

   - review the user experience and landscape as well.

   - Built-in calculator

   - Deployment of the project

Reflection

➢ What would you do the differently on future projects?

  - In future projects, I will explore other technologies for the project development so that I can enhance my technological knowledge and experience.

Thank You
